ABSTRACT

Puskesmas is one of the most important public health service facilities in Indonesia. Advances in information technology as it is now really means the pattern of human life such as information systems. The existence of data processing into computerized information becomes very important. One of the public health service facilities that need this technology is the Puskesmas Majegan, located in Klaten district, Central Java. room officers are still often troubled because they have to check one by one and when carrying out medical records storage officers still store it in the cupboard or shelf so that files can be damaged or lost. Web-Based Application for Inpatient Registration, Room Management and Medical Records is expected to be a solution to these problems with features such as inpatient registration, managing room management and storage of medical records is expected to be able to facilitate inpatients in the Puskesmas Majegan to do registration, room management and storage of medical records. This application was built using the PHP programming language, with the Codeigniter framework and its database using MySQL. The application development method uses the Waterfall methodology.
