ABSTRACT

Application management of student organizations in Telkom University is an application that can help members of the organization in obtaining information on activities based on the organization that students participated in, to record the attendance of members in an activity or event, and display a list of events from student organizations in Telkom University. Each member can record the attendance on activities in accordance with the activities registered in the android application. The students can see the list of events provided by student organizations and they can register online through the android application. The process of making this application uses the Prototype method. This application is based on Android with the Java programming language and the MySQL database as data storage. Hopefully, this application can help members of the organization in delivering information on activities, record the attendance of members, and assist students in getting information on student organizations' events at Telkom University.
