ABSTRACT

Barn nowadays still using manual system, because of that data management system was creatd that is useful for making data barn more organized and neat. Because all this time the barn data still being neglected, which is data still using conventional processes. From this, an application that manage a barn is used as a storage medium for barn datas. With cloud storage on web based and mobile based applications, storing information data would easier to recap data that has been stored. Without any data falsification that occurs.

Keywords: Electronic Barn, Information System, Laravel, PHP, Website.
