

ABSTRACT

This project discusses a startup called Gonigoni also a case study of making a Gonigoni customer application. Gonigoni is a business that provides a waste management system from source to end. Currently Gonigoni has several services including Gonicorner, Gonipartner, Gonimenabung and several products, namely the garbage bank application and customer application. Gonigoni has given public concern about the waste they produce, improved environmental health and increased people's income with garbage. The case study discussed in this final project is an application that addresses issues related to waste bank operations ranging from operational controls and monitors, customer platforms, to garbage pickup services. The processes contained therein must be managed in detail and clearly. But many of the people who have not contributed and know the garbage bank. With the construction of this application, it can make a platform that can be used by the public in exchanging waste into something useful.

Keywords: Waste bank, customers, communities, waste transactions.
