

ABSTRACT

Abu Aziz elementary school is a school under the Ma'had Abu Aziz Foundation. Location on Jamaras II, IV number 11A-F, Jatihandap, Mandalajati sub-district, Bandung City, West Java. One of the transactions that took place at the Abu Aziz elementary school was spp payment management. There are various problems in the process of managing spp payments, such as recording spp payments, recording payment arrears and confirming payments to student guardians. This web-based application was built using the PHP programming language and Codeigniter Framework. The functionalities include recording SPP payments from student data, collecting spp payments that have not been paid by making a bill notice, reminding payment of spp that has not been paid using via whatsapp, displaying general journals, ledgers and trial balances, displays monthly spp income report. Testing this application uses the Black Box Testing method and the method of working on this software uses the Software Development Life Cycle (SDLC) method.
