

ABSTRACT

Surya Laundry is a laundry company as well as a clothes pick up iron which is located on Jl. Sukabirus No. B7, RT 02/08, Dayeuhkolot, Bandung, West Java. In its day operations Surya Laundry gets some obstacles such as ordering laundry is still classified as manual using the telephone. In addition, customers also do not know the stages that have been completed at Surya Laundry. Therefore this application was created to assist Surya Laundry in its daily operational activities. This application was created using the SDLC waterfall model method, using the MySQL database system and using codeigniter in coding using the PHP language. This application can handle the Surya Laundry operational process starting from ordering laundry by the customer, pick-up by the shuttle officer using Google Maps as a benchmark, and customers will also know the process that has been ordered. With this application will have a good impact for Surya Laundry and will cause customer interest to subscribe.
