

Abstract

Al-Qur'an is one of the foundations of Islamic religious law that was revealed to the Prophet Muhammad Sallahu 'alaihi Wasallam to be read, understood and practiced as a way of life, especially Muslims. To memorize 114 chapter consisting of 6236 verses is not an easy thing. Until now, the authenticity of the Al-Quran has been preserved and is continuously recorded in Arabic. Some countries with Muslim majority populations have their own memorization methods, including in Indonesia. Term Frequency and Compound Term Frequency are methods that weight how often a term and compound words appear in a document and how often single or compound word appears in the Al-Qur'an. Using Compound and Term Frequency can help get a list of any verses that weigh about 80% just by memorizing certain verses, so that it can help the memorization process by memorizing certain verses. The weighting result for total of 80% using the Compound Term Frequency is better at 46,2%, compared to Term Frequency which is 39,2%.
