By implementing IT in the company, the system can be integrated to improve the progress of the company, the data needed, obtained quickly, and make the company more competitive. PT. Pos Properti Indonesia already has an existing system that collaborates with the Odoo-based ERP. However, the problems faced are not integrated with business processes in building management. So that there are several findings of problems that hinder the performance of the business process flow in the building management section. This study contains a flow of existing conditions and targeting at PT. Pos Properti Indonesia which has been integrated with ERP which will then be identified using TOGAF and business conditions in the form of a blueprint architecture at PT. Pos Properti Indonesia as illustrated by the IT Roadmap by taking into account the duration of the implementation of business processes that will come from factual information.
