Clarity of information is currently an important thing in the management of information technology. This is important because all human and business activities currently use technology so that the process becomes effective and efficient. Reviewer becomes a reviewer in a paper or written work that will determine whether the paper or written work is good or not. EzDesk (Document Management System) is an application designed to assist users in reviewing a paper or writing work. In this application there are 4 actors, namely the author who plays the role of the author of the paper, the reviewer who acts as the person who reviewed the paper, the chair as the conference organizer, and the admin who plays the role of leveraging the conference. To review a paper or paper at an ongoing conference, a reviewer must evaluate the paper or written work. After going through the evaluation stage, reviewers can provide a review and will be published by the author on the main page of EzDesk.

The abstract sheet ends with a list of keywords. Total words: 528.
