

LIST OF FIGURES

2.1	The IoT device is used in this thesis.	7
2.2	Types of machine learning techniques are discussed in this thesis.	8
2.3	The dataset contents is discussed in this thesis.	11
2.4	The overview of Jupyter notebook is used in this thesis.	12
3.1	The greenhouse is the plant placement is used in this thesis.	24
3.2	The database overview as the data storing management is used in this thesis.	25
3.3	The proposed workflow of the prediction model is used in this thesis.	26
3.4	The proposed design of the global workflow system is used in this thesis.	27
3.5	The overview for load data from database command is used in this thesis.	28
3.6	The introductory merged data overview of the automatic irrigation system is used in this thesis.	28
3.7	The introductory overview of automatic irrigation dataset is used in this thesis.	29
3.8	The overview of the retrieving dataset command is used in this thesis.	29
3.9	The overview of automatic irrigation data frame detail information is used in this thesis.	29
3.10	The overview of the merged irrigation system data frame detail information is used in this thesis.	30
3.11	The overview of the label encoder command is used in this thesis.	30
3.12	The overview of dataset scaling command is used in this thesis.	31
3.13	The overview of train/test procedure command is used in this thesis.	31
3.14	The overview of the classification tree design is used in this thesis.	32
3.15	The overview of training process command is used in this thesis.	33
3.16	The proposed train and test procedure for model training is used in this thesis.	33
3.17	The overview of accuracy score command is used in this thesis.	34
3.18	The overview of confusion matrix command is used in this thesis.	34
3.19	The overview of classification result command is used in this thesis.	34

3.20	The overview of the model prediction function command is used in this thesis.	35
3.21	The proposed diagram blocks of the prediction model system is used in this thesis.	36
3.22	The proposed proportion of train and test data of the prediction model is used in this thesis.	42
4.1	The data retrieving result from the database is used in this thesis. . .	47
4.2	The introduction overview of the plant A data retrieved is used in this thesis.	48
4.3	The data excel file from database preprocessing is used in this thesis.	49
4.4	The total of instances in the dataset is used in this thesis.	50
4.5	The dataset information is used in this thesis.	50
4.6	The count plot of the moist level attributes is used in this thesis. . .	51
4.7	The overview of moist level attributes information is used in this thesis.	51
4.8	The count plot of the irrigation level attributes is used in this thesis.	52
4.9	The overview of irrigation level attributes information is used in this thesis.	52
4.10	The count plot of the class attributes is used in this thesis.	53
4.11	The overview of the class attributes information is used in this thesis.	53
4.12	The visualization of moist level attributes overtime is used in this thesis.	54
4.13	The visualization of class attributes overtime is used in this thesis. .	54
4.14	The visualization of temperature attributes overtime is used in this thesis.	55
4.15	The visualization of humidity attributes overtime is used in this thesis.	56
4.16	The visualization of light intensity attributes overtime is used in this thesis.	56
4.17	The visualization of height attributes overtime is used in this thesis.	57
4.18	The overview of the describe function result is used in this thesis. . .	57
4.19	The overview of the attributes correlation matrix is used in this thesis.	58
4.20	The overview of the dataset after conversion is used in this thesis. .	59
4.21	The overview of the correlation matrix after conversion is used in this thesis.	59
4.22	The overview of the classification tree result generated is used in this thesis.	60
4.23	The overview of the classification tree text is used in this thesis. . .	61

4.24	The overview of the classifier’s prediction is used in this thesis. . . .	62
4.25	An overview of the accuracy score is used in this thesis.	62
4.26	The overview of the confusion matrix result is used in this thesis. . .	63
4.27	The overview of the classification report result is used in this thesis.	64
4.28	The overview of the attributes value definition is used in this thesis.	65
4.29	The overview of unseen instances prediction is used in this thesis. .	65
4.30	An overview of the second unseen instances prediction is used in this thesis.	66
4.31	An overview of the last unseen instances prediction is used in this thesis.	66
