

## **ABSTRACT**

*The ages of 9-14 years old kids are the transition period from late childhood to early adolescence and they are in the pre-puberty stage. Sexual education needs to be provided by their parents because at this age, children are deemed necessary and must prepare themselves when they enter the puberty stage, if they don't get the guidance from parents, it's feared that children will find out more, because of the low understanding of sexual education they get, and it will have a negative impact and form a wrong sexual behavior. Teaching children to be responsible for themselves and to recognize themselves for all the changes that occur is also considered the discussion of sexual education which is quite important. The design results will be based on the data obtained from the observation, interviews, questionnaires and literature study. By designing this digital illustration book about sexual education, it's hoped that children will understand more better and as intermediary for discussions between parents and child without feeling awkward, this is to prevent misinformation and reduce the risk of sexual deviant and immoral behavior.*
