The museum is a place to get information, insight and knowledge. Museums are used as a means to gain knowledge and insights that can attract people because they are fun and effective. The Zoology Museum is one of the museums where we can study and get to know animals in Indonesia with an interesting place for learning in their fields, especially for students and the general public. However, for the development of facilities and infrastructure and facilities at the Zoology Museum, it needs to be repaired due to the inadequate atmosphere of the space, completeness of facilities and infrastructure, circulation flow, and less than optimal lighting in the exhibition space. Therefore, this interior design aims to develop a Zoological Museum with the basic concept used in the design is a sequence of the evolutionary history of animals from millions of years ago. This concept was developed with the aim of providing a new atmosphere to visitors and providing comfort and can change people's perceptions of a boring and unpleasant museum to visit and make the museum more interesting and enjoyable to be visited by students and the general public.

Keywords : Museum Zoology, redesign, sequence
