

ABSTRACT

CV Unggul Jaya is a company engaged in the field of construction that has been established since 1989 which has built trust in customer in the manufacture of construct products such as bridges, railway, warehouse and others. CV Unggul Jaya use a simple way to manage account receivable and payable by manual recording. This creates a problem that affects the company's profits because there is no control of account receivable so that payment of receivable continue to be bad debt. Therefore created an application system that can manage and control receivable and debt using the agile method. This method consist of problem identification, data collection, design and testing stage.

The design of management and control application include account payable, account receivable, income, outcomeand employee salary. Based on simulation and test that have been done with black box testing, the application is as expected and runs well. Using applications can improve company performance, efficiency and effectiveness of business processes, especially in the financial sector.
