In an era of technological advances like today, humans can exchange information quickly. This is possible because of the development of technology that aims to facilitate human work. The internet is one of the results of the development of information technology. So from this description, the researcher designed a beverage sales website application for the Chi-Chi Thai Tea beverage shop. The software development model used to develop website applications is Waterfall. Researchers chose Waterfall because it adapts to a small number of developers. The test method uses blackbox testing which will test the suitability of the input given to the system and the expected output from several test cases. The design of this website application helps users to complete their work easily and is very helpful for users to do their work effectively.

Keywords: website application, sales, ordering, drinks, waterfall
