

## **ABSTRACT**

*At this time the needs of technology and information must be effective, efficient, and accountable. This applies to all areas such as education, state security, public services, even social and so on. And one of them is public services in Indonesia that utilize technology and information, namely Electronic-Based Governance System (SPBE) which is regulated in Presidential Regulation No. 95 of 2018. One of the cities that has implemented this SPBE is Sukabumi Regency, but still has a drawback that is the absence of Enterprise Architecture design on the application domain. Therefore, this research was carried out if to provide a proposal of Enterprise Architecture SPBE on the application domain in Sukabumi Regency using Hevner Conceptual Method, which is guided by the Main Performance Indicators in Sukabumi Regency and Presidential Regulation No.95 of 2018 which will be realized as integrated information and technology.*
