

ABSTRACT

Football is one of the most popular sports around the world. Starting from the age of children to adults play it. In an effort to improve skills, techniques, tactics and knowledge, facilities and infrastructure are needed to practice according to standards. This will have an impact on a team to show the best game when competing and also achieve achievements in the competition that is being undertaken. In Indonesia itself, the enthusiasm of the people in the field of football is very high.

Especially the Indonesian national team which until now does not have an adequate soccer training center. The unavailability of facilities such as a gym, swimming pool, auditorium, dressing room, and players' mess has made it difficult for the Indonesian national team to compete with other countries, especially in the Asian region. Based on the analysis of the identification of the problem, the formulation obtained is how to realize the interior design of the soccer training center in it and how to meet the needs of facilities for athletes, coaches, and officials. While the design methods used are literature studies, interviews, data analysis, data collection, concepts and technical drawings.

The purpose of the Football Training Center is as a means of supporting the activities of athletes, coaches, and team administrators so that they have a centralized training center. Based on the phenomena that occur about football, the conclusion that can be drawn is that this Training Center is a manifestation of solving problems related to the interior of the Football Training Center. In addition, making it a centralized area for administrators, management, and athletes. This will create a sense of togetherness and kinship between the team members.
