

ABSTRACT

As it is known that skin care or beautifying yourself is one of the most important parts of your daily beauty routine. One of the users of consumers or care or makeup products is usually career women or women, because they want to show a different side when doing activities outside the home. In addition, women also want to show a conspicuous side in themselves, because of that with routine care or beautifying themselves so that they need some skin care and make-up products for the daily routine needs of consumers or facial care users. In addition, facial treatments have several types, functions, benefits and brands according to needs that have been adapted to their benefits and functions. In addition, due to the carelessness of a woman who keeps beauty products in any place so that some problems will arise such as beauty products that cannot be reused, it is difficult to find beauty products when they want to use them, it will be difficult because of the mess of beauty products that are placed everywhere. The purpose of this storage design or set of containers is to minimize clutter on the workbench and besides that, materials that are easy to use and environmentally friendly are expected to reduce excessive waste disposal. So with the use of qualitative methods and the UCD (User Centered Design) approach in the design so that it helps in the process of needing the container that is used as a medium for storing these beauty products.

Keywords: Bamboo, Skin care, Container.
