

ABSTRACT

As known, students have the need for equipment or media that helps learning activities and activities to make it easier to apply the academic according to their needs. In addition, students' academic needs cannot be separated from laptops, electronics and other stationery. So it requires storage media or arrangement to make it easier for students when they are studying outside the home or boarding house. The media that makes it easy to help with obstacles in organizing the equipment needed by students is none other than a bag. This is because students also usually carry out learning activities such as in cafes and parks due to reducing stress and feeling depressed. And usually there are many students who often do activities or do assignments outside the room to get inspiration, so they need a base to write on or to put their laptop. Therefore, the design of a multifunctional bag by adding a table stand feature and utilizing mushroom leather material, a multifunctional bag can also help student activities when they are outside. In addition, the design of the bag using mushroom skin is intended so that it can be used and used to produce something which can be used as best as possible to produce a useful product. By conducting observations, interviews and approach methods so as to adapt to the needs of students when carrying out activities while in the park.
