

## **Abstract**

Nowadays human life cannot be separated from technological advances, considering that the times have developed rapidly. Technology is now widely used in terms of product needs or work. From the point of view of life, technology is very influential on what is created as if discovering new things that are released. The progress of technology, which is getting faster and faster, certainly makes a lot of changes to a country, including in Indonesia. The rapid development of information technology has had a positive influence.

Along with the times, technology is now likened to have become an inseparable part of our lives. At home, on the street, at work, at school or campus, at the center, at recreation or entertainment venues, at government offices, and even at places of worship, technology is present to fill every aspect of our lives. It is a human being attached to what is created by technological aspects such as smart home and smart mode. However, some people still use technology. However, from some circles of society, there are still those who use technology irregularly or make it impossible to be effective in using these products.

Referring to the above discussion, this research was conducted to make products from problems, one of which is a wardrobe that always uses aspects of the smart mode system where this aspect is very useful according to the needs of users who use more efficiently and easily. The creation of technology to facilitate energy saving, increase safety, and product comfort, and provide an impact on user awareness for more effective use.

**Keywords:** wardrobes, smart fashions, appliance system
