

ABSTRACT

The RT/RW neighborhood is an institution that assists local governments in the success of various Regional Government policies that are placed into the RT/RW work program. Executing the existing work programs, RT/RW require a process of planning and recording the financial data to implementing the program. The purpose of making this web based application is to provide convenience for the RT/RW neighborhood in managing administrative processes and making it easier to record all transactions that occur in order to produce a financial report. This application was built using the PHP programming language with CodeIgniter and MySQL framework for database storage. This web based application is tested using the Black Box testing method, therefore the web based application can run as the developer expected.
