ABSTRACT

Balai Besar Bahan dan Barang Teknik (B4T) is a company engaged in technical services that offers industrial needs, policies for the Ministry of Industry and national activities. Currently B4T requires an application to introduce the service process to prospective industrial companies that will collaborate with B4T.

This application will be made using Unity technology to create Augmented Reality menus using the B4T logo as a marker and displaying the B4T technical service process and company information in 3D.

The result of making this application is to display the technical service process smoothly in 3D and can be easily understood and used by B4T parties

Keywords: augmented reality, 3D, technical services.
