

ABSTRACT

Keywords : Education Center , Future , Electric Vehicle

Education and Recreation Center is an important part of a journey of human life on earth, a good education center will have a big impact on the human life system in the future so that they can survive well.

Public Space Electric Vehicle Education and Recreation Center is an educational center facility with a focus on exhibiting electric vehicles from local manufacturers, communities, or world brands that have previously given their role to the development of electric vehicles in Indonesia. This museum is located in the Capital Region of Jakarta, precisely on Jl. Jendral Sudirman, Senayan, South Jakarta.

The condition of the surrounding environment which is crowded with crowds and institutions is in accordance with the target desired by the Electric Vehicle Education and Recreation Center, namely to educate urban communities who are not aware and understand about environmentally friendly fuels. The Electric Vehicle Education and Recreation Center not only provides display facilities about electric vehicles but also has several supporting and supporting facilities according to standards.

The design of the Electric Vehicle Education and Recreation Center in Indonesia is a form of response to the void that exists between a special automotive education center and an education center about science in Indonesia, so that the design of this educational center will be the first in Indonesia.

The benefits resulting from the design of the Electric Vehicle Education and Recreation Center are increasing the variety of educational centers in Indonesia, helping to provide solutions to pollution problems in Indonesia, providing massive and permanent education through museum media to the Indonesian people, providing an example for the center. other education to become a leader in a new innovation in the world of interior architectural design.
