

ABSTRACT

Fencing is an interesting sport that began to be competed in the Olympics in 1896. In Indonesia, fencing has been included in one of the sport national at National Sport (PON) since 1951. The Fencing center is a forum for Indonesia fencing athletes, especially in DKI Jakarta to continue the competition in national and international competition. To support all of fencing athletes and the existence of fencing in Jakarta, a sport building for fencing was designed to suit the needs and all the facilities in accordance with the applicable standards of fencing sport. The purpose of this design is to make the activity safely and comfortably. The design of the Fencing Sport Center uses analysis and interview methods. The process of analysis and interview was obtained by visiting the object of a comparative study. However, interview were also conducted with relevant agencies. The results of the analysis and interview become implemented into the concept of processed interior elements.
