

ABSTRACT

NEW INTERIOR DESIGN OF JAKARTA INTERCULTURAL SCHOOL WITH GREEN DESIGN APPROACH

In the era of globalization, quality education is a demand in every country. Therefore, the younger generation must also be provided with an international level of education to be able to compete globally. International Standard Schools have become an obligation to obtain quality of education. However, many International Standard Schools do not have an adequate facilities and couldn't meet the standards of an International Standard School. In addition, the has not yet implemented the green design concept. One of them is the Jakarta Intercultural School for high school. With the aim to meet the standards of Government Regulations and Regulations of the Minister of National Education so as to support government programs in increasing the global competitiveness of the younger generation in the era of globalization and the design is in accordance with the DKI Jakarta local government program in realizing green building. The research method used is a qualitative method, a method with descriptive data in analyzing objects such as through interviews, observations and field studies. In addition, secondary data was collected related to the study of literature from books, archives and journals relevant to the design.

The results showed that by carrying out a new design at the Jakarta Intercultural School with a green design approach, it could answer existing phenomena and problems. Safe Learning Environment as the theme and Minimalist style as the concept was chosen as a consideration to support student-teaching activities optimally by prioritizing comfort and health.

Keywords: DKI Jakarta, Jakarta Intercultural School, Green Design.
