

ABSTRACT

Rising unemployment rate due to Covid-19 pandemic, Indonesians are also having difficulty finding new jobs because limited knowledge and information about job openings due to the rise of hoax vacancies or spread on social media to the detriment of society.

Jobbie is an app designed to make it easier for job seekers and prospective workers who are especially for the bojongsong region, with this application can access about employment information for all people and the company has the authority to establish procedures for the receipt of recruitment process carried out by the company so that job seekers get certainty for the recruitment process.

The app uses API Level 21 version 5.0 to run its programs with a MYSQL database and using the Extreme Programming (XP) method as technically developing software. This method is a software development approach or model which tries to simplify the various stages in the development process so that it becomes more adaptive and flexible.

Jobbie application testing is carried out to find out the quality and success from the application that has been designed by using the testing unit that is black box.
