## **ABSTRACT**

The development of the city of Jakarta is growing very rapidly, economic growth is also increasing, office workers are increasing, more businesses are growing and increasing the number of employees working, skyscrapers are being built every year. The number of office workers is increasingly increasing their interest in increasing the potential that exists within them in order to remain competitive with other candidates in the world of work, the name of the personality school is already familiar to the people of big cities, such as John Robert Powers which has developed and expanded. business to cities in Indonesia. However, with the lifestyle of people in big cities who work in high-rise buildings, then after school work, personality schools located in high-rise buildings will also be boring. So this can be suppressed with Biophilic design, because biophilic design has been proven to reduce stress levels with the interior elements in it. . In this design using several design methods, primary and secondary. And also literature study. After the data is collected, an analysis is carried out according to the data obtained. The design results consist of working drawings and others according to the theme of the concept taken.

Keywords: Personality School, JRP, Jakarta and Biophilic design
