

ABSTRACT

In Indonesia, there are often natural disasters caused by volcanic eruptions, earthquakes, tsunamis, and many others. Every time a disaster occurs, the government will certainly not remain silent, but the problem is that the government has taken action for a long time in assisting in areas that have experienced disasters, especially areas that are difficult to reach and small areas. Therefore, it requires volunteers who have experience so that they can be directly involved in disaster management. However, becoming a disaster volunteer is quite difficult due to the lack of information obtained by people who wish to volunteer, and volunteer forums are difficult to disseminate information, especially in the event of a disaster in an area near where they live. Based on the problems found, this final project will design an application that can later be used as a medium for disseminating information regarding disasters and also for volunteer candidates who will become disaster volunteers in Indonesia.

Keywords : Disaster, Volunteer, Volunteer Forum.
