

## ABSTRACT

---

*The Smart-Café application is an application is to make it easier for the customer to place an order, process the payment, and also the customer can see the stock of food and drinks available in the cafe. This web-based application uses the waterfall method in his research. As for the background of making this project because someone who wants to order is feel difficult. Besides that, the recording of reports is still recorded using a book or note so that it creates a queue for ordering time, the transaction process also supervises the order, and the availability of food and beverage stocks is not clear. then orders are often confused or incorrectly at the time of delivery. The Smart-Cafe application has good potential to be developed into a project for a more efficient sales and transaction process.*
