Abstract

The bus station is one of the public facilities in the transportation sector that has functioned as a place to stop public transportation and raise and lower passengers. Tirtonadi Terminal is located in the city of Surakarta and is located at Jalan Jenderal Ahmad Yani 262, Gilingan, Banjarsari, Surakarta City, 57134, Indonesia. This terminal is included in the type A terminal bus with a land area of 5 hectares and a building area of 3.5 hectares. This terminal has several deficiencies that can affect some activity of visitors, the deficiency that are encountered are air conditioning and lighting, improper layout arrangement, unclear user circulation, and not facilitating for persons with disabilities, and lack of attention to breastfeeding facilities for mothers. From these problems will use the approach of urban cultural locality added with the concept of modern natural design that combines modern concepts with the use of natural materials. So that it can give a functional impression that still gets warm colors from the natural materials used.
