ABSTRACT

Pesantren is an education system that has long existed in Indonesia. Pesantren has a system in the form of Islamic religious learning that teaches various classical Islamic books in the fields of fiqh, theology and Sufism. Over time, the pesantren has experienced rapid development, so that the pesantren has included a madrasah and boarding system that allows students or students to stay to study. The interest of the Indonesian people to the pesantren education system continues to increase, this is evidenced by the search for the number of santri and pesantren in Indonesia. However, it is unfortunate that the increase in the number of students is not comparable to the facilities provided and owned by the pesantren. So that the pesantren is required to accept a large number of students but has not been able to provide maximum facilities. This design aims to identify the various problems that exist in several Islamic boarding schools, especially the Darul Quran Mulia Integrated Islamic Boarding School. Then a comparative study was conducted to see how the criteria for a good pesantren had been implemented in Indonesia. The problems obtained will be analyzed and used as material for problem formulation, then redesign is carried out to achieve the interior design criteria and facilities that are in accordance with the standards and provisions forward to the existing literature. The purpose of this design is to create a comfortable and ideal space to support the varied activities of students and teachers with the religion approach.
