**Abstract**

The development of internet brings tremendous effect to human's life, but not all of it are positive effect, there are also negative effects. Cybercrime is one of it's result. One of cybercrime is DoS, DoS is a simple attack to internet network but quite effective, some losses were caused by DoS. Therefore a system to detect DoS is needed urgently, in this research will be proposed a sistem to classify DoS with accuracy more than 80% [8][5][? ]. There's also simplified labels which caused training time decreased but accuracy keep in the same level.

**Keywords:** DoS, classify
