

ABSTRACT

Digital Printing is a printing method that uses advanced technology to carry out the printing process, currently Egoapatis printing services in making order transactions still use the manual method, namely by means of consumers coming directly to the printer and placing orders. With this web-based Digital Printing application, it can make it easier for consumers to print the desired items, as well as make it easier for selfish parties to record and manage consumer orders, this digital printing application has 2 access rights, namely admin and consumer, as for the background in making the final project report. This is an order that is made to Egoapatis still using the manual method, this will make the order less effective because consumers have to come directly to the store and take a long time. This final report will discuss the application made in the consumer module section. This application is made using the Waterfall method, CodeIgniter Framework, and using the PHP programming language.
