

ABSTRACT

Queensha Skin Clinic is a company engaged in beauty services who serve sales of beauty services and products. Queensha as well as recording all transaction activities are still recorded manually, include recording cash disbursements thus allowing duplicate data and errors in recording. From these problems, a web-based application for recording and reporting cash disbursements that was able to record and manage cash expenses on Queensha Skin Clinic quickly, precisely, and accurately because with a computerized calculation of cash expenditures such as purchases, payment of expenses and others can be stored properly and cash disbursements reports can also be presented automatically. Recording cash disbursements at Queensha will later produce accounting reports consisting of purchase reports, general journals, ledgers, and income statements. In developing this system, the design used is the SDLC waterfall method and the PHP programming language with MYSQL database. Tests are carried out using Black Box Testing.
