

ABSTRACT

SMA Negeri 1 Girimarto is one of the high schools located in Central Java Province, Wonogiri Regency with the address Jalan Maron-Girimarto. At SMA Negeri 1 Girimarto, the process of recording student grades is still using a manual system so it takes a long time to process the final grades per semester. The document is still in hardcopy, so it is possible that the file can be damaged or lost. Based on the problem explained, it is proposed to make a Assessment System Application for Academic Learning Activities with the main features, namely a feature to record student scores per subject by the teacher, a feature to record individual student evaluations that are expected to build confident, and a feature to view all notes academic activities such as grades and individual evaluations by parents. This application was created with the waterfall method, database with MySQL, and the PHP programming language with the Codeigniter framework. While testing using the Black Box.
