

## ABSTRACT

---

*A gold shop is a shop that sells government-owned or individual jewelry to meet the public's need for jewelry or other things. The problem experienced by the company is that there is no application for transactions. Then the solution we offer is to create an application to help facilitate transactions and accounting records. And the method we use is the prototype method and black box testing. The conclusion of this application is to facilitate companies in purchasing and recording transactions.*

*Keywords: Accounting, Application, Prototype, Black Box Testing*
