

ABSTRACT

Madina Gold Shop which is located in nanggaleng village Cibaregbeg village, District Cibeber, Cianjur regency, is a company engaged in trade. Madina gold shop has been established since December 14, 2007. Transactions that occur in Madina Gold Store are Purchases and Sales, as well as accounting records that are still recorded manually. The problem experienced by the company is the absence of applications for transactions and recording, making it vulnerable to record-keeping errors and loss of sales notes. Then the solution that we offer is to create an application to help facilitate transactions and accounting recording. This application is made using the method of prototype and black box testing method. The conclusion of this application is to facilitate the company in sales and recording transactions.

Keywords: accounting, application, prototype, blackbox testing
