

ABSTRACT

Palem Indah Recreation Park is a company engaged in the service that offers the community a water tourism spot, namely a swimming pool. Where sales of gate tickets, canteen, as well as swimming equipment and other merchandise are the main drivers for increasing revenue in the recreation sector. Up to now, Palem Indah Recreation Park does not have a special system or application that is used for recording transactions and financial reporting so that this company has difficulty knowing the sales reports generated by the company in a period. With the development of information and communication technology, the authors propose a web-based accounting information system design for recording transactions and financial reporting using the PHP programming language and MySQL database. This system application can carry out the posting process and making general journal reports, general ledger reports and income statement reports. This system is expected to help Palem Indah Recreation Park in producing faster and more accurate information.

Keywords: Accounting Information System, Purchases, Sales, income statement, Web application.
