

ABSTRACT

Wiwin Catering is a manufacturing company that has a business license engaged in catering located at Permata Kopo Blok CA no. 73 Rt. 08 Rw. 06 Sayati Margahayu Subdistrict, Bandung Regency. Transactions that occur in Wiwin Catering is a transaction of purchase, loading and selling. There are various problems in the process of recording transactions, especially the recording of sales in cash by paying a down payment in advance of 40%, and the remaining 60% will be paid when the catering has been received by the customer, as well as the recording of charges issued each month, as well as accounting reports. To solve the problem, a web-based application is built that can manage the sale of cash or down payment sales, loading transactions and generate accounting reports such as general journals, general ledgers and profit and loss statements. This web-based application is built with object-oriented methods and develops a Software Development Life Cycle (SDLC) model and uses php programming language, CodeIgniter Framework.

Keywords : Sales, Catering, CodeIgniter Framework, Web-Based Applications.
