

## **ABSTRACT**

*The Office of Religious Affairs (KUA) is the Technical Implementation Unit of the Directorate General of Islamic Community Guidance in charge of carrying out some of the duties of the Regency/City Ministry of Religion in the field of Islamic religious affairs. KUA is domiciled in the sub-district area. One of the services at the Office of Religious Affairs (KUA) is to provide marriage registration services which incidentally require population administration to register marriages. The Meral District Religious Affairs Office (KUA) uses a web-based application, namely SIMKAH (Marriage Management Information System) in entering requirements until the process of selecting the time for the implementation of the contract, but this application still has problems because this application is national and is used by all Offices of Religious Affairs. in every sub-district in Indonesia, this makes the central server network slow and sometimes unusable when inputting.*

*The government implements information technology and information systems aimed at aligning IT strategies and business strategies, to achieve this the government can implement Enterprise Architecture (EA) in order to optimize existing business architecture designs, Enterprise Architecture (EA) is a structured approach used to define and describe the system requirements of a government agency or company so that it can be used to design and develop systems in the future to be more efficient.*

In this research, a design using the Zachman Framework has a 6 x 6 matrix in which there are six perspectives, namely Planner, Owner, Designer, Builder, Sub-Contractor, and User. And has six columns consisting of what, how, where, who, when, and why. This research will produce an Enterprise Architecture design in the form of Blueprint, IT Roadmap, Organizational Design, and IT Value. This final result can conclude that all the designs made are related to the object of the Office of Religious Affairs (KUA) in the marriage registration service
