

ABSTRACT

People with disabilities are often underestimated because they have physical and mental deficiencies. The limitation of movement related to the activities carried out is one of the major influences of physical disabilities. The influence both internally felt and externally received will have its own impact on the mental of persons with disabilities, one of which is to make peace with their shortcomings through a sense of self-acceptance. This study seeks to determine the movements performed in daily activities related to the physical and mental conditions experienced by persons with physical disabilities due to accidents in the process of self-acceptance. This study uses a qualitative method. Data collection techniques in the form of literature study interviews to obtain information about the focus of the problem. Self-acceptance is a form of positive attitude in order to achieve good living conditions. Improved mental health conditions affect the movement of these characters. Animation design uses animation theory in 3D animation.
