ABSTRACT

Mutiara Furniture is a company engaged in buying and selling furniture/furniture that offers various types of home furniture. Currently Mutiara Furniture needs an application to introduce the products they sell to their customers in an attractive way. This application will be made with an attractive User Interface display. The menu is made in the form of a catalog, from existing Furniture Items with price details and there is Augmented Reality which displays 3D of the goods being sold along with the description and price of the item, this application will use a marker to identify the object.The expected result of making this application is to be able to display 3D of goods sold at Mutiara Furniture and a description along with the price of the goods, so that it is easily accessed by customers to see what goods are sold at the store.

Keywords: Augmented Reality, Furniture, Marker
