Mixed media is a technique that in the manufacture uses more than one material so as to produce textures or colors more diverse. The background of the problem discussed in this final task is how to combine tulle fabric and cotton yarn using crochet technique so that it becomes an explorative sheet for fashion products. The purpose of this research is to produce innovations of explorative sheet work from mixed media tulle fabric materials and cotton yarns using crochet techniques for fashion products. The method used in this study is qualitative method, by collecting literature data from various sources such as journals, books, websites and thesis to search for reference data. Then conduct material observations to determine the type of material to be used, online observations that aim to know the trend trends of social media, explore to produce explorative shapes and compositions. Conduct online interviews to find out the current developments of crochet and the products that are being contested. Then to find out the use of mixed media on fashion products. The benefit of this research is to provide innovation of mixed media processing using tulle fabric material and cotton yarn and inspire the application of such processed in fashion products.
