

## **ABSTRACT**

*Infectious diseases caused by viruses or bacteria are very susceptible to occur in mall, therefore people should pay more attention to hygiene and health while in the public zone, but sometimes because they are too focused on the activities, we do not care about hygiene and the potential for disease infection in the mall.*

*One of the efforts that can help increase public awareness of hygiene and health when in a public zone is with a facility product that can keep the people hygiene and provide products and information about health, with facilities like this, the potential for disease infection in the public zone may be reduced. Therefore, the author will make a product design called "Healthy Spot" which is a hygiene and health facility for people in the mall, by analyzing various features and functions as well as ergonomic aspects of the product to support user comfort and easiness while operating these product.*
