

## **ABSTRACT**

*As you know, the world is currently in a pandemic. Including the country of Indonesia. What are the government's efforts to sub-district and prevent the spread of the Covid-19 virus. Until now, the government has conducted large-scale community activities. The community relents to activities outside the home while keeping the health protocol regulations. The main activities of the community after a long time the government imposed Lockdown community began their respective work. When doing activities outside the home workers must remain alert for the transmission of the virus that is still when until now. Which way is by keeping public health protocols. In addition, the community also equips themselves with health equipment that can be transmitted corona virus. In addition to bringing equipment activities to get out of the house, nowadays the community must also bring personal health equipment for the transmission of virus transmission. Surveys show that cleanliness is the main one that is inspired by workers today in addition to carrying work equipment and for cleanliness carrying health equipment that is often every activity outside the home. As often as able can also be diserkurikan comfortable for a long period of time for refugees shoulder or back injuries.*
