

## **ABSTRACT**

The tie-dye technique is a way of dyeing fabric textile material to make patterns on the fabric by tying the desired part to be exposed to the dye with pressured media caused by bonding. this dyeing technique has advantages that can be generated in the appearance of fabric design. coloring the tied and dipped in the dye. the result achieved from the dyeing technique is the presence of colored parts with wrinkled and cracked pattern in the form of lines from the binding result. the pattern produced from dyeing technique is only on the tied part, the part that is not bound will still have the basic color of the fabric. During the pandemic, people are required to stay at home and carry out activities ranging from work, study and other activities at home. Therefore, the need for clothing is the most important thing, comfortable clothes are important to support activities at home. Besides being comfortable, an attractive style is the main thing so as not to make people bored at home. Tie-dyed homewear is a solution to overcome the clothing needs of people who have to do work at home.
