

ABSTRACT

This research discusses the design of makeup organizer for students' daily activities by utilizing waste materials of furniture production wood pieces. The waste of wood pieces that the writer used in this design derived from CV Manggala located in Klaten Regency, Central Java which is one of the companies engaged in the furniture industry. The writer discovered the amount of wood waste strewn around the factory environment that was left alone, so the writer felt like utilizing the waste of the piece of wood into a more valuable and functional product. In designing this make up organizer, the writer designed the makeup organizer by considering the material aspect, the function aspect, and the appearance aspect. The target user of this design is a student (female) who likes to apply makeup for daily activities and has various makeup equipment. This research is expected to provide inspiration for the furniture industry to process wood waste so that the utilization of wood can be maximized and does not produce too much wood waste.

Key Words: make up organizer, student, wood waste
