

ABSTRACT

The management of student organizations at Telkom University at this time still does not use the application. The secretary still manages the data of members and management using Excel, which results in frequent loss of the data. Meanwhile the treasurer still manages the organization's cash manually using excel, therefore there is often a loss of the organization's cash data. Therefore it is necessary to have a student organization management application at Telkom University is an application that helps administrators manage members and administrators' data, see the attendance of participants in an event held by the organization, and manage cash in the organization. Making this application with the prototype method. This application is web based with PHP programming language, and MySQL database as data storage media. It is hoped that this application can help administrators manage member data, manage organizational cash, and manage attendance lists of members.
