

ABSTRACT

Karya Bersaudara Cijerah (KBC Bersaudara) is a manufacturing company that produces clothing for children such as t-shirts that have a brand called "Hopperkids". Calculation of cost of production is a very important thing in the company as a step to determine the selling price of the product before it is sold to consumers. In carrying out business processes, manufacturing companies often experience difficulties in reporting and calculation because they only use Microsoft Excel in carrying out their business processes. This application was built with the aim of managing the recording of raw material purchase transactions, calculation of production costs and determining the selling price of the product. The method for determining the selling price uses the Full Costing method and the development method in this application uses the SDLC (System Development Life Cycle) method and is built using PHP with MySQL database and testing using the Black Box Testing.

Keywords: Manufacture, Full Costing, PHP
