Elderly is the ultimate stage of the human life cycle, during which the elderly endure deterioration in physical and psychological situations due to health issues such as balance abnormalities, abrupt disorientation, dementia, and others. According to the 2014 National Socio-Economic Survey, Indonesia has one of the world's greatest old populations, with Bandung being one of the country's largest donors to the aged. To meet this requirement, many orphanages are built with facilities that do not meet standards, and crucial concerns like as the elderly's comfort, safety, and health are not properly considered, resulting in the elderly having trouble adjusting to their new living environment in social institutions.

The design of this social institution is centered on old women over the age of 60, with the goal of creating a social institution that can maximize all existing activities according to the needs of the elderly, particularly their physical and psychological constraints. In order for the elderly to be able to move and remain productive, it must support their welfare, physical, and spiritual health.

"Golden Memories and Life Satisfaction" is the concept raised in the design of the Tresna Werdha Social Home in Bandung, where the residents are the elderly who have reached the highest age stage in human life. It is intended that by using this design, the elderly will be able to enjoy old age by obtaining physical and spiritual prosperity as well as a sense of fulfillment in life by creating lovely memories in their final years.
