

ABSTRACT

The Era of Informatics is always develop. Needed about the information has Growing up and running so fast and precise on the company's cycle, from the operational until the managerial, and it's happening at the PT.Dok Kodja Bahari. In their way to processing the data, they still left behind in the usage of the information technology, to input the data of employee they still using the manual ways and keeping the data in the map, and it take a time to assemble it, and the chance of losing data is more bigger and take a times to made a right decision for the company. So the purpose of this research is create the application to help PSDM divison to manage employe's data, salary calculation and managing leaves data. The application using a SDLC method on the construction and using a programing language such as PHP and HTML and also using a Codeigniter as the framework. The hope is with this application has made can help minimize a problem of losing the data.
